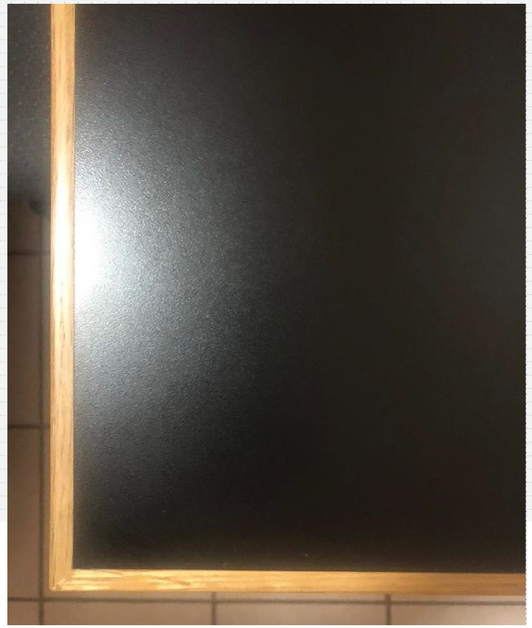
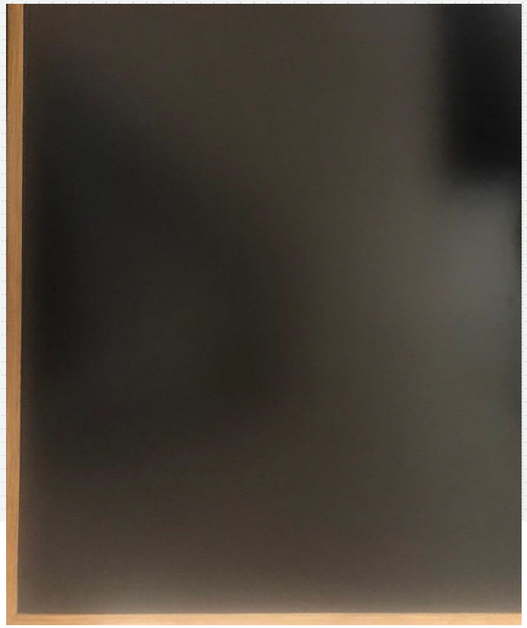
THE MATERIALS IN THE SPACE

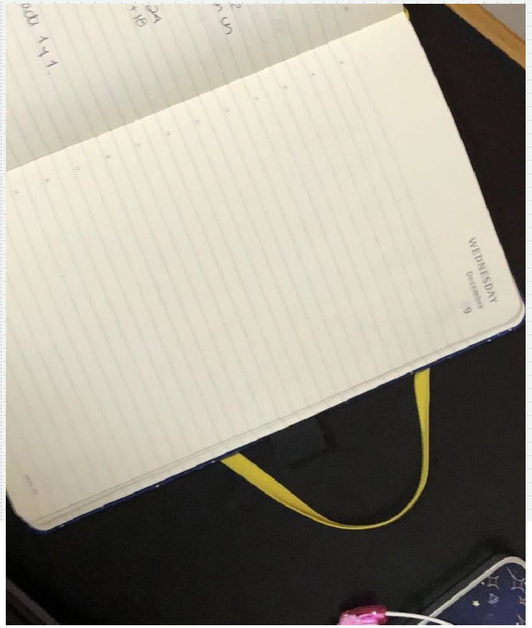
This file is an example for you to use to complete assignment 3, which is about identifying the materials you can find in your work space.



Desk finish:
Matte black plastic laminate. The photo was taken with the ceiling light turned on, which reflects on the surface.

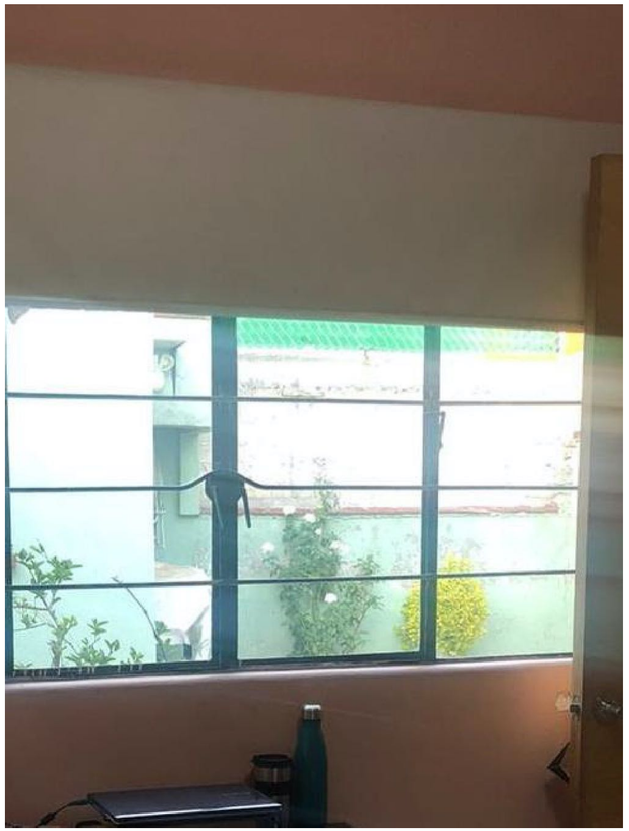


Desk finish:
Matte black plastic laminate. The photo was taken with the photographer's back to the light fixture, and in this case it doesn't reflect on the finish.

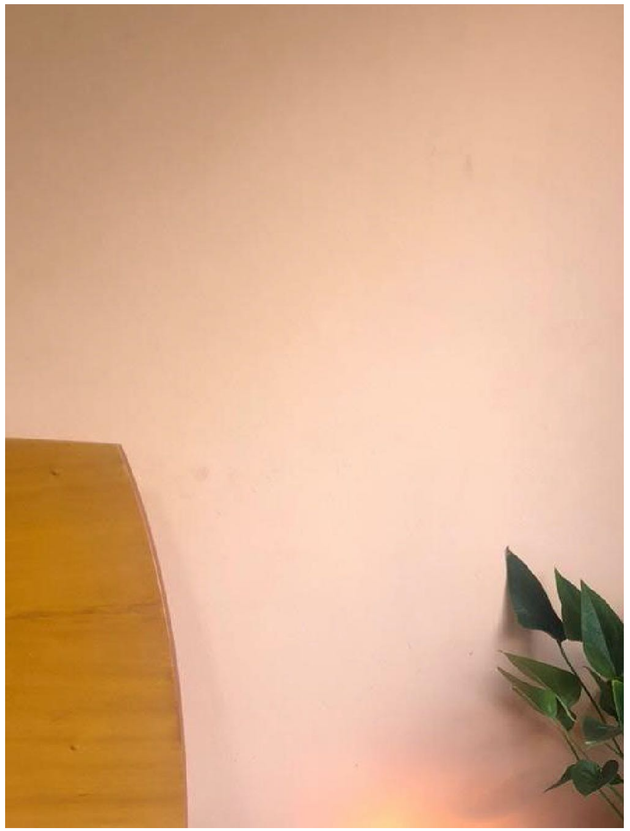


When working, I always use a **notebook to take notes,** and this one doesn't reflect light. Sometimes the sun streaming through the window can be annoying.

The Materials in the Space



Black-out curtains.
Plasticized fabric, 75% polyester and 25% fiberglass. It prevents light from coming in from the exterior and ambient light needs to be turned on. However, since it's white, it reflects light.



Vinyl paint wall finish.
The color helps prevent light from reflecting in the space during the day. But if it’s a cloudy day, it won’t be useful since the ceiling light will need to be turned on.
